

Feel like you have tried everything...

Pet Obesity is a huge epidemic facing our country. In a study done in 2009 45% of dogs were overweight, which equals 35 Million canines!!! Obesity can not only be unsightly but also cause heart disease, cancer, diabetes and joint problems. Just two pounds on a small dog is like an additional 60lbs on us. The Northampton Veterinary Clinic is excited to launch a new weight loss program with client ease and efficiency in mind.

Hill's® Prescription Diet® Therapeutic Weight Reduction Program

This program works similar to the NutriSystem Program for People, each starter kit includes:

- 72 Food / 54 Biscuit Packets (Small Breeds) or 66 Food / 60 Biscuit Packets (Large Breed)
 - These packages are pre-measured so no measuring cup needed
 - The feeding guide ensures you know exactly the quantity of packets to feed
 - The High Fiber Diet helps your companion feel full while slimming down
 - Refill packets are available of both food and biscuits (typically each last 4-5 weeks)

Look at these Success Photos!!!

Your Companion could be one of them. Please ask our staff to help get you started!!
